## SECURITY ALERT AND GATEKEEPER

### How to protect your Mac

When you open a file downloaded from the Internet with a file quarantine-aware applications, or from external sources (such as email attachments), OS X warns you where the file came from. You receive an alert asking, "Are you sure you want to open it?" You should click Cancel if you have any doubts about its safety.

File received via an official FAO source (such as ext-ftp.fao.org) should be considered safe.

There are mainly two ways to protect your Mac apps downloaded and installed from the Internet could adversely affect it:

- The deny list
- Gatekeeper

## The deny list

The "deny list" is a technique to prevent known malware from running on your Mac. Unique attributes of identified malware are added to this list and if you attempt to open an app on the deny list, you will see a informing you about it.

If you see this message, you should click Move to Trash.

If you see this message, you should click Eject Disk Image and then delete the source file.

You can click the Help icon in the lower left corner of the alert message for more information about malware.

## Gatekeeper

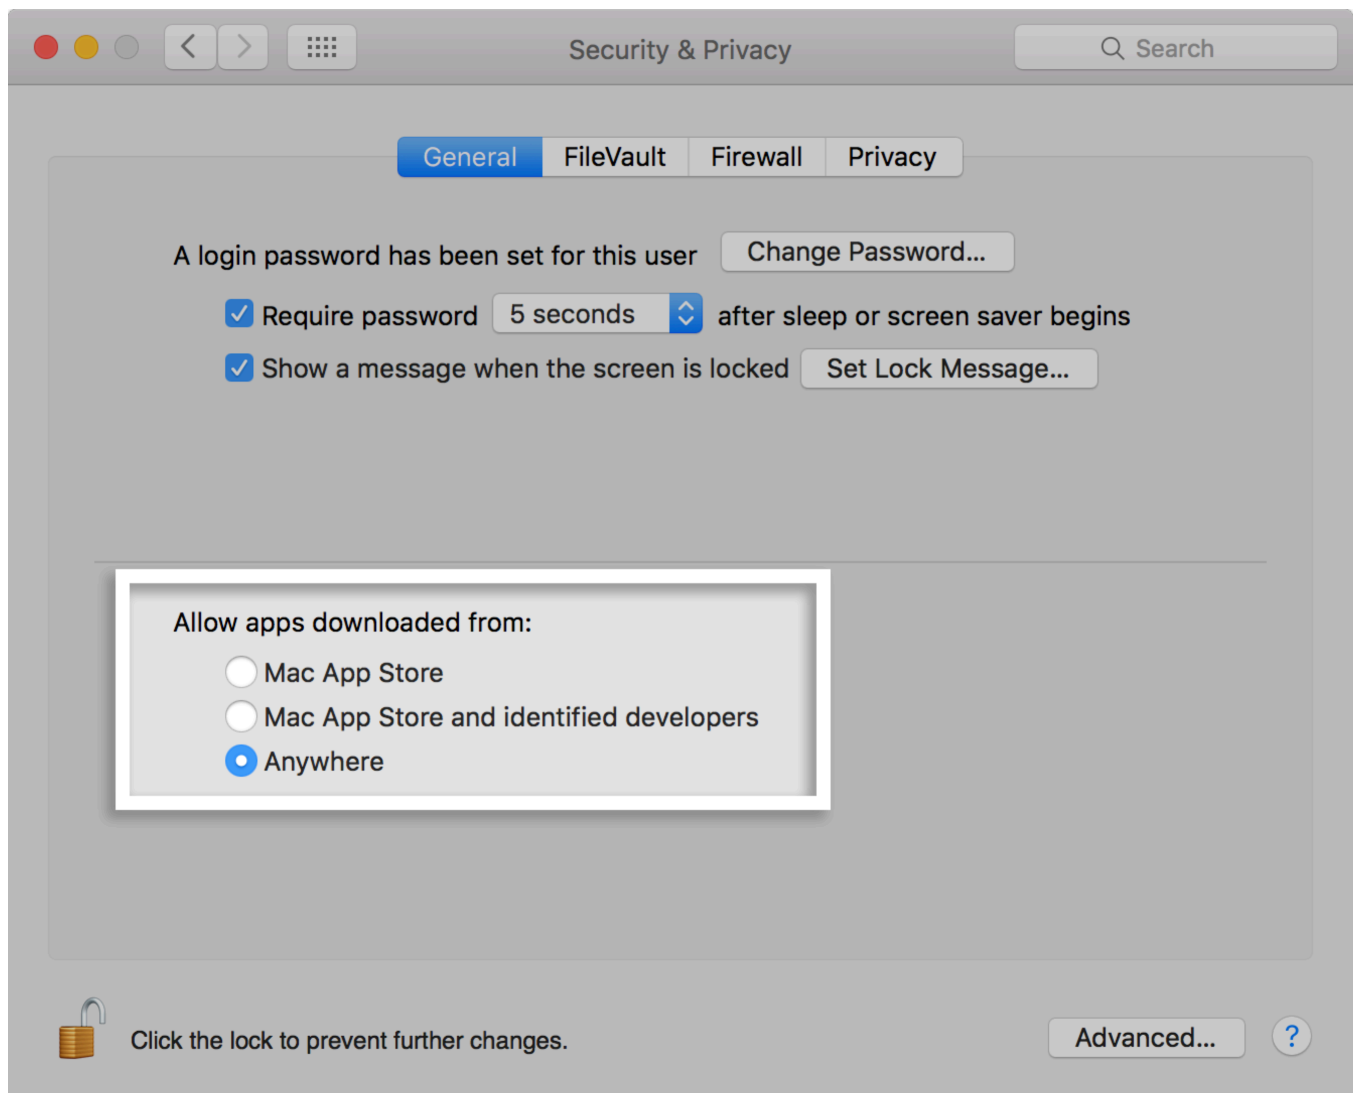

With Lion (OS X 10.7) Apple introduced a new feature, “Gatekeeper”, to help protect Mac computers from malware and misbehaving apps downloaded from the Internet.

Gatekeeper gives you more control over what you install according to how much you trust the source.

Currently there are two options to install RuralInvest for Mac.

### Temporarily change Gatekeeper configuration

To install RuralInvest for Mac you can temporarily change Gatekeeper options, found in **Apple menu > System Preferences... > Security & Privacy > General tab** under the header "Allow applications downloaded from:" selecting “Anywhere” as shown in the image below.

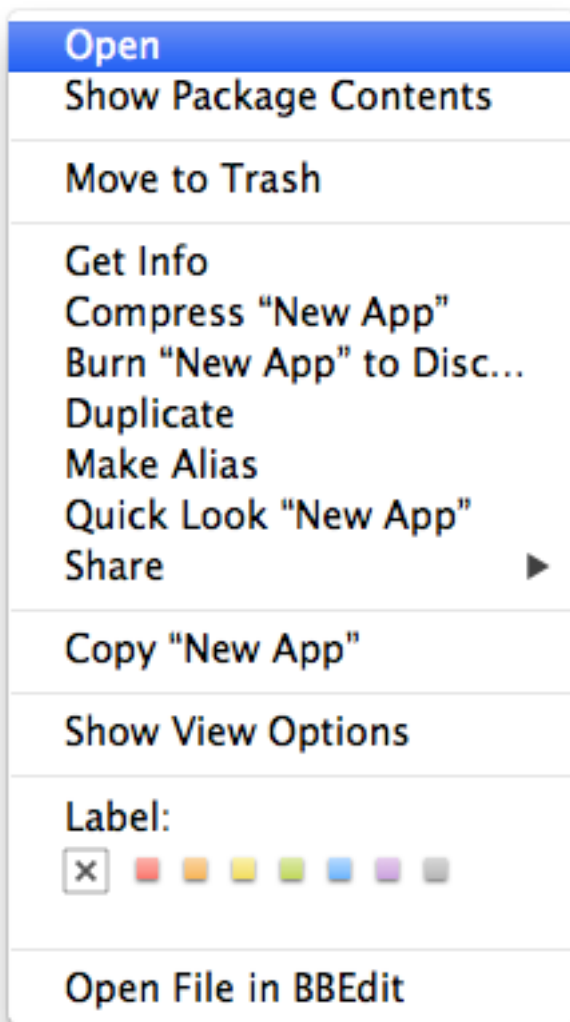

And restore your previous configuration once you finished installing RuralInvest.

### Exempt RuralInvest from Gatekeeper

If you received RuralInvest from a source you trust, you can open it by following these steps.

1. In Finder, Control-click or right click the icon of the app.
2. Select **Open** from the top of contextual menu that appears.

3. Click **Open** in the dialog box. If prompted, enter an administrator name and password.
